

CIPHERLAB CO., LTD.

SOTI MobiControl Software Now Available for CipherLab Windows®-based Mobile Computers

Taipei, Taiwan — March 9, 2009 — CipherLab, a leading innovator in Automated Identification and Data Capture for the retail, warehouse and distribution markets, and SOTI Inc., developer of mobile device management/advanced security and support software, today announced the release of SOTI's MobiControl for CipherLab's 9400 and 9500 series mobile computers.

SOTI MobiControl enables users to access a robust set of features including software provisioning, remote control/helpdesk toolset functionality, screen capture, remote device diagnostics, file transfer and advanced security. These core features allow IT teams to manage and support their mobile workers more effectively and efficiently without requiring a central depot for their mobile devices.

The powerful and user-friendly 9400 and 9500 series mobile computers deliver features such as built-in digital camera, multi-form data input, multi-scanning options, and the ability to read and write RFID tags. They lead the industry with up to eight hours of battery life in WLAN mode, and surpass drop impact standards—important considerations for demanding conditions of the warehouse or field-use environments. Supported by SOTI's MobiControl software, the 9400 and 9500 series offer customers a complete mobile computer solution that quickly and economically meets the mobile worker's needs.

About CipherLab

CipherLab is a global leader in the design, manufacture, and marketing of Automatic Identification and Data Capture/Collection products and systems. The company's mobile CIPHERLAB CO., LTD. computers and scanners are integrated into the networks of some of the world's best known logistics, retail, distribution, government installations and healthcare companies, helping them run more efficiently and effectively onsite and on the road.
