# Route Sales Peter at Work

This is a story about a route sales representative, Peter, who is going on his day's work with CipherLab 8630 Mobile Computer.

Peter is loading goods in to the truck and reviewing driver itinerary before departure.

It's needed to report distribution deficiencies, sales activities or any changes back to the office.

Here's my first stop. Let me unload the goods

Send updates back to the office right away

I've just got a new order from the shop owner

Oh no~ No Wi-Fi connection here!

It's ok. I can upload data over a free wireless connection while on my way to the next stop.

Get free Wi-Fi you access can save 3G data plans or recurring monthly charges

Here we are. This is the coffee shop with a free Wi-Fi hotspot that I come by for data transmission.

Route Sales Peter at Work

CipherLab WISPr Library

Do you know that my CipherLab 8630 can auto-authenticate Wi-Fi hotspot without requiring to register every time it connects?

Thanks to CipherLab WISPr Library.

It enables you to bypass the captive portal landing page with one-time configuration.

Select one to connect the mobile hotspot from the list of available public Wi-Fi networks.

Log in successfully! The inputs are updating.

Any needed changes have been notified to the manager in customer service for follow-up.

Let's go to the next stops and finish up my day's work.

-The End-

Demo kit is available. Please contact CipherLab sales representative for assistance.
